

TerminEdge Canted Fascia for Single-Ply Application

TerminEdge Canted Fascia combines custom engineering and superior performance with an attractive appearance. The patented design of our extruded aluminum anchor bar securely terminates the membrane, while the unique design helps keep the flange out of the waterline.

This top-line fascia provides the maximum protection against wind uplift damage that is available in today's roofing market and is tested to be compliant with relevant building codes. All that and it is easy to install, reducing time and labor costs.
