

## PermaSnap Cantilever Coping for EIFS, Brick, and Panels

PermaSnap Cantilever Coping is the perfect solution for attachment to a parapet wall with a non-structural exterior building facade.

Conditions such as EIFS, brick, or panels don't allow for traditional anchoring to the exterior building structure, but PermaSnap Cantilever Coping's unique support brackets bring extra stability to the roof edge system when attachment is required from the outside facade. It has a full snap-on design with galvanized steel anchor clips and factory-applied stainless steel springs that ensure long-term positive attachment. PermaSnap Cantilever Coping is custom fabricated in sizes to meet specific job requirements.

### VERSIONS
